Sonetics and Logic Energy Expand Relationship Providing Wireless Team Communication Solutions to Australia and New Zealand

Logic Energy will Offer Sonetics' Communication Systems for Mining, Public Safety, Fire and Rescue, Aviation, Construction and Manufacturing Operations

February 28, 2012, Portland, Oregon and Christchurch, New Zealand – Sonetics, a leader in innovative team communication solutions for challenging environments, today announced its partnership with Logic Energy, a leader distributor of wireless solutions for Australia and New Zealand, authorizing Logic Energy's reseller network to provide Sonetics' [wireless headset systems](#) for a variety of critical communication applications, including mining, public safety, fire and rescue, aviation, construction and manufacturing operations. Logic Energy specializes in the distribution of high quality communications product solutions, including two-way radios and accessories, and will now offer, sell and support Sonetics' systems through its distribution centers in Australia and New Zealand.

"Logic Energy was founded to support resellers and their customers with leading communication solutions across Australia and New Zealand," said Dave Hicks, Director of Logic Energy. "As the pioneer for truly wireless team communication headsets and systems, Sonetics was the obvious partner for us."

All of Sonetics' systems support hands-free, full-duplex communications up to a 600 meter range while also monitoring up to two radio channels and providing push-to-talk radio transmission from the users' wireless headsets. The headsets provide 26dB of hearing protection and are completely wire-free, with no external antennas, belt packs, or wires to snag or entangle users. Sonetics' solutions provide an advanced battery management system that delivers not only 24-hour continuous operation per charge and two-hour full recharge, but also ensures that the headset is fully ready to operate up to a year after the last charge. They use 1.8 GHz DECT communications technology to allow full-duplex communication between local teams and radio transmissions via push-to-talk connectivity to existing radio systems.

"Logic Energy is well known as a leading distributor in Australia and New Zealand who has great wireless communications expertise and as providing outstanding service and support to their resellers and customers," said Sonetics' Chief Operating Officer Reed Stager. "We are actively working with leading distributors such as Logic Energy to deliver the benefits of Sonetics solutions, including greater safety of work group members, increased team communication effectiveness, and enhanced productivity."

Sonetics' solutions are compliant with frequency requirements in Australia and New Zealand, as well as the European Community and most Asian countries.

About Sonetics Corporation

Sonetics is the leader in innovative and proven team communication systems. Sonetics delivers the clear communications that are essential for the productivity, safety, and effectiveness of work teams in aviation, firefighting, public works, marine, construction, mining and industrial operations. Our systems, with headsets and radio interfaces, ensure all team members can hear and be heard, even in the most challenging environments. We pioneered the development of hands-free wireless headsets, which allow team members to stay in continuous contact without being tethered to an intercom or belt pack. Twice

named by *Inc.* magazine as one of America's 500 fastest-growing private companies, Sonetics, together with its Firecom and Flightcom divisions, helps more than 500,000 customers in 90 countries solve their toughest communication problems.
