

Recharging the ComHub

rev. 09-02-15

PROCEDURE

1. Confirm the fuse inside the ComHub is good. If not, replace the fuse and then try to charge the ComHub.
2. If that does not fix the problem, open up the ComHub bag exposing the “12VDC” port on the end of the ComHub.
3. Plug one of the yellow headset charging plugs into the “12VDC” port. *(see photo)*
4. If the GREEN LED on the ComHub turns on when you plug in the cable, you will need to press the YELLOW POWER button to turn the ComHub OFF.
5. If the GREEN LED *does not* turn on, press the YELLOW POWER button to turn the ComHub ON to confirm the ComHub is getting power from the headset charging cable. Once confirmed, turn OFF the ComHub.
6. Let the ComHub sit for five (5) minutes plugged into the headset charging cable.
7. Unplug the yellow headset charging cable and plug the ComHub back into the red ComHub charging cable.
8. Check to see that the green smart charger’s RED LED is illuminated confirming the ComHub is charging.
9. If the RED LED *does not* illuminate, try Steps 3-8 again, this time leaving the yellow headset charging cable plugged in for 10 minutes.

Plug the yellow headset charging cable into the “12VDC” port on the end of the ComHub.

NOTE: If the LED on the smart charger turns GREEN after a short period of time (less than 1 hour), unplug the smart charger from the ComHub for approximately 30 seconds and then plug it back in to complete the charging cycle. A full charge on a ComHub can take up to 4 and 1/2 hours.
