## Overview

Sonetics Wireless ComHubs are the heart of a Sonetics Portable Wireless Communication System. SCH310 ComHubs support full duplex, conference call-like digital communication for up to 10 Sonetics DECT7 Wireless Headsets. Radio PTT-capable headsets can be configured to transmit on a portable radio via the ComHub. For situations that require a large number of connected users, such as education or tour groups, Broadcast Mode supports up to 100 users. Tethering your SCH310T with a second ComHub (SCH305 or additional SCH310T) lets you connect two teams in a single talk group. SCH310/T ComHubs also have DECT channel capability, allowing users to talk on up to five different channels.

Sonetics DECT7 wireless operates on the 1.9GHz band providing secure, interference-free, communication. With internal and external antennas, the ComHub Base Stations configure themselves for best reception and a line-of-sight range of up to 1,600 feet. USB programming allows complete customization.

## Contents in Box

### **SCH310 & SCH310T ComHub**

- Wireless ComHub
- 2 ea. Duck Antenna

### **Manual and Reference**

- SCH310 & SCH310T User Manual

### **Accessories (included)**

- SCH310 ComHub Bag
- ComHub Bag Hanger Hooks
- ComHub Shoulder Strap
- 12V AC Wall Adapter
- 12v DC Cigarette Lighter Adapter

### **SCH310T Model Only**

- CAT5 Crossover Cable, 7 ft.
- PR to RJ45 Jack Adapter

## Accessories (not included)

### External Antennas

Relocate the line-of-sight point of your ComHub antenna. Magnetic and permanent mount versions available.

### Portable Radio Cables (PR Cables)

Connect to virtually any portable two-way radio and many other devices. Call us at 877.685.4838 to verify your radio's make and model or visit [www.soneticcorp.com/radio-interface-guide/](http://www.soneticcorp.com/radio-interface-guide/).

# Features

## Wireless DECT7 Communications

SCH310/T ComHubs feature wireless DECT7, enabling conference call-like full duplex communication. The ComHub will connect with Sonetics Wireless Headsets. DECT7 networks have up to 1,600 feet line-of-sight range in Region 1 (US) and up to 800 meters in Region 2 (EU). DECT7 ensures interference free, digitally encrypted communications for all parties.

## Waterproof Case

Sonetics SCH310 and SCH310T ComHubs are built using genuine Pelican™ cases for superior waterproofing.

## External Antenna Connectors

External antenna connectors provide an option to relocate the wireless base station antennas when the ComHub must be placed in a location with poor reception.

## Cable Tethering (SCH310T only)

Connect two teams together in a single talk group when you tether your SCH310T ComHub with an additional SCH310T or an SCH305 ComHub (*requires included PR-RJ45 and CAT5 Crossover cables*).

## Carry Bag

A rugged nylon carry bag with hi-vis reflective fabric and comfortable shoulder strap. The included Hanger Hook accessories let you easily and securely elevate the ComHub for improved range.

## USB Programmable

The ComHub's Base Stations can be configured from integrated USB ports using a Windows PC. Features may be customized and saved. Refer to the Sonetics Configuration Utility software for details, or visit [www.soneticscorp.com/support/firmware-update/](http://www.soneticscorp.com/support/firmware-update/).

## **Backwards Compatibility**

The ComHub is backward compatible with previous generation Sonetics Wireless Headsets, with a reduced feature set.

## **Wide Band Audio**

Wireless DECT7 communications are transmitted in a high definition, wideband audio format for greater voice clarity, and for optional integration with voice activated control systems. Audio bandwidth can be switched to narrowband when necessary.

## **Dual Antenna Design**

The ComHub's Base Stations have internal and external antennas for improved reception as you move around the work zone.

## **Multi-Channel System**

The ComHub can be configured for use with up to five channels on only one of its two wireless base stations. These can be remotely selected from a Wireless Headset paired to the corresponding base station.

## **Broadcast Mode**

Connect up to 3 instructors with up to 100 users for training, education, tours and other large group applications. Broadcast Mode users must press PTT to talk with guides or instructors, who remain in Full-Duplex Mode.

# Setup

## Orientation

The SCH310/T has the greatest range when placed in a specific orientation. The handle on the bag should be up when in use. Refer to the orientation stickers on the ComHub and bag for details.

*Stickers on the sides of the case help you position the ComHub for best reception.*

## Height

The higher you can safely place the SCH310/T (or its external antennas if equipped), the better its range. Range can be up to 10 times greater with the ComHub or antennas 10 feet high than with it on the ground.

## Line of Sight

If you can see the ComHub when wearing your DECT7 Headset, you will experience better reception. When you lose sight of your ComHub, your reception may be reduced depending on your environment. Walls, trucks, or other solid objects may degrade reception. Some objects such as chain link fence may impact reception even though they can be seen through.

## Charging

The SCH310/T charges through a connector on the outside control panel. There are two LEDs on its control panel to indicate its status.

- Red LED on the Power Button – This lights when the ComHub is actively charging.
- Green LED next to the Power Button – This lights steady when the ComHub is fully charged. When the ComHub is turned on, this LED flashes to indicate the battery charge level. See the diagram below for details.

## ComHub Controls

- **Power Button** – Turns the ComHub off and on.
- **Charge LED** – Indicates when the ComHub is actively charging.
- **Status LED** – Indicates when the charge cycle is complete. It also indicates the battery level during use.
- **Charge Port** – Connects to an external power supply to charge the ComHub batteries.
- **PR Connector** – Used to connect a portable radio to the ComHub.
- **External Antenna Ports** – Connects accessory external antennas.

## Connecting a Portable Radio

The SCH310/T ComHub can be connected to a variety of handheld portable radios using Portable Radio (PR) cables. For details, visit [www.soneticscorp.com/accessories/portable-radio-adapters/](http://www.soneticscorp.com/accessories/portable-radio-adapters/)

**NOTE:** When two SCH310T ComHubs are tethered, neither ComHub will allow users to transmit via headset PTT over the portable radio.

## Installing a PR Cable

- Once you have selected the correct PR Cable for your application, attach the end that looks like the image above.
- Use your Sonetics screwdriver to tighten the screw on the connector to the ComHub. *CAUTION:* Overtightening can damage the connector.
- Connect the other end of the PR Cable to your radio.

# Adjusting the Gain Controls

Input Gain Adjuster  
Output Gain Adjuster

## Setting Output Gain

1. Set the volume on your radio to between 50 and 75% of maximum volume.
2. Set the volume on your headset to level it is most commonly used at.
3. Using a #0 Phillips screwdriver, turn the Output Gain Controller to its lowest setting (counter-clockwise until it stops).
4. While activating radio transmit and speaking into the headset mic (get a helper if necessary), VERY slowly turn the Output Gain Adjuster clockwise until the volume heard on the radio is at the desired level.
5. **DO NOT** turn up the Output Gain Controller too quickly. Adjusting the gains too high will result in poor sound quality, and could cause your radio to shut down.

## Setting Input Gain

1. Set the volume on your radio to between 50 and 75% of maximum volume.
2. Set the volume on your headset to level it is most commonly used at.
3. Using a #0 Phillips screwdriver, turn the Input Gain Controller to its lowest setting (counter-clockwise until it stops).
4. While activating radio transmit and speaking into the radio (get a helper if necessary), VERY slowly turn the Input Gain Adjuster clockwise until the volume heard on the headset is at the desired level.
5. **DO NOT** turn up the Input Gain Controller too quickly. Adjusting the gains too high will result in poor sound quality.

## Pairing Headsets

Pairing creates a connection between a ComHub Base Station and the Headset. This is only required once. After pairing, Headsets will connect automatically. You may pair any Headset to any position on either Base Station.

### Full-Duplex Pairing

1. Press and hold the desired pairing button until its link indicator begins to flash slowly. Any previous pairing will be forgotten.
2. With headset powered OFF, place the Headset into pairing mode by pressing the right PTT button and the power button until you hear "base station registering".
3. The Base Station will automatically connect, showing a solid link LED.
4. If the pairing was unsuccessful, repeat Steps 1-4 above.
5. Pair any additional Wireless Headsets to remaining open positions.

### Broadcast Mode Pairing

Broadcast Mode allows 100 devices to be paired. A full duplex pairing must be present to activate Broadcast Mode. Broadcast users cannot Radio Transmit. NOTE: Users may experience a slight loss of range when utilizing Broadcast Mode.

**Example:** Position 1 has a Full Duplex Headset pairing. Positions 2-4 are available for devices to share. Position 5 broadcasts back to the group.

1. Press and hold Buttons 4 & 5 until their link LEDs flash slowly.
2. Place the wireless device you wish to link into pairing mode (see Step 2 above).
3. The Wireless Base Station will automatically connect showing a solid link LED on Position 5 and the device will show connected (refer to the Sonetics device manual).

4. If the pairing was unsuccessful, repeat steps 1-3.
5. To pair additional devices, repeat steps 1-4.

Because Broadcast Mode Headsets share communication positions, there can be slight delays in communication. To talk, the Push-To-Talk button must be held until a position opens. After a Broadcast call is made, there will be a pause in which incoming communications cannot be heard.

### To exit Broadcast Mode:

Press and hold Position 4 or Position 5 until the link LED flashes slowly, indicating pairing mode. Power off the ComHub and power on to complete the process.

## TETHERING COMHUBS (SCH310T MODEL ONLY)

### SCH310T to SCH305

### Parts needed:

- (1) Cat.5e Crossover Cable\*, any length
- (1) PR-RJ45 Adapter

### Setup:

1. Attach a PR-RJ45 Adapter to a Cat.5e Crossover Cable using the instructions included with the PR-RJ45 Adapter.
2. Connect the PR-RJ45 Adapter to the SCH310T ComHub as per the PR-RJ45 Adapter instructions.

**\*Please note:** the Cat.5e Crossover Cable is a specialized cable. Must use a "crossover" cable. A standard Cat.5e cable will not work for this application.

## SCH310T to SCH310T

### Parts needed:

- (1) Cat.5e Crossover Cable\*, any length
- (2) PR-RJ45 Adapter

### Setup:

1. Attach the PR-RJ45 Adapters to the Cat.5e Crossover Cable using the instructions included with the PR-RJ45 Adapter.
2. Connect a PR-RJ45 Adapter to each SCH310T ComHub as per the PR-RJ45 Adapter instructions.

### *IMPORTANT NOTES ABOUT TETHERING*

A minimum of 7' of separation between the two ComHubs is recommended.

When ComHubs are tethered, portable radio push to talk functionality is altered: For example:

With a SCH310T ComHub tethered to a SCH305 ComHub, a portable radio can only be interfaced to the SCH305 (not the SCH310T). Users paired to the SCH305 ComHub can hear and radio push to talk from their headsets. The users paired to the SCH310T ComHub will be able to talk in full duplex mode with users from both ComHubs and hear the portable radio communication, however, they **will not** be able to push to talk over the portable radio's frequency.

When two SCH310T ComHubs are tethered together, the users paired on either ComHub cannot push to talk to communicate over the portable radio. Note: each wireless headset paired to either of these SCH310T ComHubs, needs to set their headset into "DECT Narrow" via the Advanced Menu on the headset.

## CONNECTING EXTERNAL ANTENNA

Fig. 1 (left): Faceplate removed.

Fig. 2 (above): Internal coaxial connections.

Fig. 3 (below): External coaxial connections.

Follow these steps to connect the accessory external antennas (not included). **IMPORTANT:** To avoid performance degradation, two external antennas must be used simultaneously:

- 1) Remove the ComHub from the red carry bag.
- 2) Open the lid by releasing the two underside latches.
- 3) Remove the faceplate around the base stations by gently pulling on each corner (*Fig. 1*).
- 4) Disconnect the Duck Antennas from the Base Stations (located inside the lid of the ComHub). Place the Duck Antennas in the carry bag's side pouch for safekeeping.
- 5) Attach the gold coaxial connectors to the antenna ports on the base stations (*Fig. 2*).
- 6) Remove the black plastic covers at either end of the control panel, exposing the external coaxial connectors.
- 7) Connect the external antennas' coaxial cables to the gold connectors (*Fig. 3*).

# DECT CHANNEL MODE OPERATION

When used in this configuration, up to 5 channels are available from only one of the ComHub's two Base Stations.

## Configuring for Channel Selection (ComHub Mode)

To enter configuration mode; select a Base Station on which to enable DECT channels. **NOTE:** Either Base Station will work for this purpose. In order to use DECT channels, Wireless Headset users must be paired to the Base Station with DECT channels enabled.

1. Power off the ComHub.
2. While holding the Position 3 pairing button, power on the ComHub.
3. Continue holding the Position 3 pairing button for 10 seconds.
4. The Base Station is now ready to select the number of DECT channels.

## Selecting the Number of Available Channels

5. Press the pair button corresponding to the number of channels desired (button 2 = 2 channels, etc.).
6. To exit configuration mode, power off the ComHub and then power it on.

## Headset Verification of Available DECT Channels

Before you begin using channels, verify that you have the expected number of available DECT channels by cycling through channels using the Wireless Headset:

1. Turn on your APX377 or APX379 Wireless Headset.
2. Allow the Headset to pair with the ComHub or Base Station.
3. Press the forward ► and back ◀ buttons together to toggle DECT Channel Selection. A voice prompt announces "Channel".
4. Press the forward ► or back ◀ button on the right-hand side of the Headset. Voice prompts announce "Channel 1", "Channel 2", and so on.
5. If you are unable to access the expected number of DECT channels, repeat Steps 1-6 in "Configuring and Selecting..." above.

## PC Programming

The Wireless Base Station in your ComHub has a USB port located near the Antenna Jack. Using the Sonetics Configurator program, you can adjust additional features using a Windows PC, or perform firmware updates when necessary. Refer to the program for additional information.

### Locating the USB Port

(Left) The USB port is located in the center of the side wall of the base station, just below the Sonetics logo.

(Below) To access the USB port, remove the tray from the case by lifting up at the edges to release the hook-and-loop fasteners.

## Installation of the Sonetics Configurator Windows Program

1. Go to [www.SoneticsCorp.com/software](http://www.SoneticsCorp.com/software).
2. *Download* and *Install* the program for the wireless base station.
3. Plug in the USB cable from the Wireless Base Station to the computer. The Base Station will power up.
4. Open the Sonetics program.
5. Follow the directions of the Sonetics program.

## Troubleshooting

**Note:** If you are experiencing symptoms not covered here, or are having difficulty troubleshooting, call us or visit our website. We're here to help.

### Service Contact:

Phone: (877) 685-4838

[service@soneticscorp.com](mailto:service@soneticscorp.com)

### No indication of power to the base station

1. Make sure that the Wireless Base Station cable is fully plugged in.

### No audio communication and/or PTT from or to the base.

1. Make sure the Wireless Headset(s) are on, paired, connected, and are using the same channel.
2. Ensure that the communication cable is properly connected.
3. Check the communication cable for continuity.
4. Ensure correct polarity of the modular plug on both ends of the modular cable.

### Poor quality audio, low or distorted audio.

1. Check the ComHub gain settings (see "Adjusting the Gain Controls" above).
2. Poor audio quality can also be caused by a defective Headset. Check operation with a known, properly functioning Headset.

### Audible interference from portable and mobile radios.

1. Care should be taken to install cables away from radio and antenna cabling to prevent RF interference.

### Poor coverage range.

1. Check the Wireless Base Station and external antenna locations. They should not be installed inside metal enclosures or closer than 4 inches to a metal object or surface.
2. Poor range can also be caused by a defective Headset. Check operation with a known, properly functioning Headset.
3. If the problem persists, contact Sonetics Service for additional help.

## Important Safety Information

---

**⚠️ CAUTION! Follow all warnings and instructions marked on the product or contained in the owner's manual.**

---

When using this product, always follow basic safety precautions to reduce the risk of fire, electric shock and injury to persons, including the following:

- ⚠️ Do not use the wireless system to report a gas leak in the vicinity of the leak.
- ⚠️ Use only the power adapters, and power cords indicated in the manual. If more than one type of power adapter is included in the product, the manual specifies which adapter should be used for each component. Be sure to use the proper adapter for each product component.
- ⚠️ Do not place the power cord where it creates a trip hazard or where it could become chafed and create a fire or electrical hazard.
- ⚠️ Do not subject the unit to high temperatures or leave it in direct sunlight for an extended period of time.

**SAVE THESE INSTRUCTIONS!**

### Warning for Sensitive Electronic Devices

This equipment and any radio-based electronics can potentially cause electromagnetic interference with other equipment and can be interfered with by other equipment. This also applies with DECT based equipment. Due to the very low transmission power associated with DECT, the chance for interference is small. However some specific precautions must be taken into account for sensitive electronic equipment e.g. sensitive laboratory equipment, medical instruments or medical implants to avoid incidental influence of equipment operated in straight nearness to sensitive electronic equipment. You are therefore advised not to place the DECT equipment or its antenna in close proximity to sensitive equipment by maintaining a 20cm minimum distance between the sensitive equipment even in standby mode. Please also consider referencing the documentation provided by us and the manufacturer of sensitive electronic items guiding its proper usage.

## General Communication Privacy Notice

Although this equipment may contain specific protocols that enhance security and privacy of communication, privacy of communication may not be ensured when using this equipment.

### Notice:

Modification not expressly approved of by Sonetics Corporation could void the users authority to legally operate the equipment and will nullify warranty. This includes the use on non-approved antennas or 3rd party amplifiers with the radio base station.

**This section applies to radio frequency equipment bearing an I.C. Equipment ID Number.**

Under Industry Canada regulations, this radio transmitter in the Base Station in this device may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

The radio transmitter in this device IC: 7895A-950325700 has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Approved Antennas for use with this device:

- SON150 Wireless Base Station Antenna Sonetics P/N: 521-0014-00 (3dBi)
- Magnet Vehicle Mount Sonetics P/N: 114-0139-00 (4.4dBi) (Sold Separately)
- Permanent Mount Antenna, Sonetics P/N: 114-0138-00 (4.4dBi) (Sold Separately)

This section applies to radio frequency equipment bearing an I.C. equipment ID number.

This device complies with Industry Canada license-exempt RSS standard(s).

Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Ce dispositif est conforme à la norme CNR d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes:

- (1) le dispositif ne doit pas produire de brouillage préjudiciable, et
- (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

### Canada SAR Information:

This Base Station in this device contains a radio transmitter. This device has been shown to be capable of compliance for localized specific absorption rate for uncontrolled environmental / general public exposure limits specified in RSS-102, ANSI/IEEC95.1-2002 and have been tested in accordance with the measurement procedures specified in IEE 1528-2003.

#### Caution

This base station, other base stations or approved base station antenna meant to be used in conjunction with this equipment must not be used in close proximity to the body. Keep a minimum distance of greater than 20 CM to the human body. This device and antenna must not be co-located in conjunction with any other equipment antenna or transmitter.

#### Attention:

Déclaration d'exposition aux radiations:  
Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

The Base Station in this device complies with part 15 of the FCC rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

Modifications not expressly approved by Sonetics Corporation could void the user's authority to operate the equipment.

### **FCC/IC RF Exposure Warning**

- The Base Station in this product complies with FCC radiation exposure limits set forth for an uncontrolled environment.
- To comply with FCC RF exposure guidelines the base station and any antennas must be installed and operated 20cm (8 inches) or more between the product and all persons body (excluding extremities of hands, wrists and feet). Note: All necessary accessories are included in the package; any additional or optional accessories are not required for compliance with the guidelines.) Use of other accessories might not comply with FCC or IC RF exposure guidelines.
- This product may not be collocated or operated in conjunction with any other antenna or transmitter.
- This device has been tested and meets the FCC RF exposure guidelines.

### **FCC Authorized Antenna Information:**

Under FCC regulations, the radio transmitter in the Base Station in this device may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by FCC. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

The radio transmitter in the Base Station in this device has been approved by Industry FCC to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated.

Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Approved Antennas for use with this device:

- SON150 Wireless Base Station Antenna Sonetics P/N: 521-0014-00 (3dBi)
- Magnet Vehicle Mount Sonetics P/N: 114-0139-00 (5.5dBi) (Sold Separately)
- Permanent Mount Antenna, Sonetics P/N: 114-0138-00 (5.5dBi) (Sold Separately)

# Sonetics Standard Limited Warranty

Sonetics Corporation (“Sonetics”) warrants to the original purchaser of its products that products will be free from defects in materials and workmanship under normal and proper use for the period of **one (1) year** from date of purchase.

Sonetics Corporation will repair or replace, at its option, any products showing factory defects during this warranty period, subject to the following provisions and obligations:

1. This warranty applies only to a new product sold through authorized channels of distribution.
2. All work under warranty must be performed by Sonetics Corporation or Sonetics Authorized Service Center.
3. All returned products must be shipped to our address, freight prepaid and Sonetics will return products to customer via ground freight. Any expedite fees or additional freight charges will be charged to customer.
4. Any attempt to repair, service, or alter the product in any way voids this warranty.
5. This warranty does not apply in the event of accident, abuse, misuse, liquid contact, improper installation, unauthorized repair, tampering, modification, fire, earthquake, or damage from other external sources – including damage caused by user-replaceable parts.
6. This warranty does not apply: (a) to consumable parts such as batteries, ear seals, intercom bags, cables, external power supplies, parts listed as accessories to a system, or other parts designed to diminish in function over time unless a failure is due to a defect in materials or workmanship; (b) to cosmetic damage or to defects caused by normal wear and tear or aging of the product; (c) to damage caused by use with non-Sonetics products; (d) to damage caused by operating the product outside the permitted or intended uses or environments described by Sonetics; (e) to damage caused by service performed by anyone who is not a representative of Sonetics or an Sonetics Authorized Service Provider; (f) to a product or part that has been modified without the written permission of Sonetics; (g) if any Sonetics serial number has been removed or defaced.
7. This warranty does not extend to any other equipment, apparatus, vehicle, aircraft, or watercraft to which this product may be attached or connected.

**THE FOREGOING IS YOUR SOLE REMEDY FOR FAILURE IN SERVICE OR DEFECTS. SONETICS CORPORATION SHALL NOT BE LIABLE UNDER THIS OR ANY IMPLIED WARRANTY FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES, NOR FOR ANY INSTALLATION OR REMOVAL COSTS OR OTHER SERVICE FEES. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING THE WARRANTY OF MERCHANTABILITY OR FITNESS OF USE, WHICH ARE HEREBY EXCLUDED. TO THE EXTENT THAT THIS EXCLUSION IS NOT LEGALLY ENFORCEABLE, THE DURATION OF SUCH IMPLIED WARRANTIES SHALL BE LIMITED TO ONE YEAR FROM DATE OF PURCHASE. NO SUIT FOR BREACH OF EXPRESS OR IMPLIED WARRANTY MAY BE BROUGHT AFTER ONE (1) YEAR FROM DATE OF PURCHASE.**

Subject to the terms and limitations of this Sonetics Standard Limited Warranty, this warranty covers any new covered product found to be defective within the applicable warranty period. Sonetics reserves the right to examine the alleged defective covered product to determine whether this Sonetics Standard Limited Warranty is applicable, and final determination of warranty coverage lies solely with Sonetics. If Sonetics determines that warranty coverage applies, Sonetics reserves the right to either repair or replace a covered product or any part thereof, as determined by Sonetics in its sole discretion. If the product has been subjected to conditions which exclude coverage under the warranty, customer will be so advised. Customer may then authorize paid repair service or other disposition of the product. Notwithstanding any other provision of this warranty, if you sell or otherwise transfer ownership of your covered product, this Sonetics Standard Limited Warranty shall automatically terminate.
